

Grid-Enabled Water Heater

Large Water Heater Options

In 2015, Congress established a new water heating product called “Grid-Enabled water heater” to help minimize the effect of the DOE (Department of Energy) rules. These large capacity electric water heaters come in 75 gallon and larger models, and are specifically made for use in electric utility load control programs.

Palmetto Electric offers 85 and 105 gallon Grid-Enabled water heaters.

NOTICE

Grid-Enabled water heaters are **intended ONLY for use as part of an OFF-PEAK WATER HEATING program**. These water heaters will not provide adequate hot water unless enrolled and activated in Palmetto Electric’s H2O Select program.

Do not purchase a Grid-Enabled water heater unless you plan to enroll in the H2O Select program.
